Plastic Tier Sheets, also known as Separator Sheets and Layer Pads, offer maximum load stability, reduced contamination and greater product protection for the rigid container industry, including those making food and beverage cans, aerosols, PET bottles and glass containers.

**Washable and sanitary**

Manufactured to comply with industry standards, Plastic Tier Sheets are moisture and chemical-resistant. Both washable and sanitary, they are also completely odorless, eliminating any potential flavor migration.

**Multiple use**

Plastic Tier Sheets, with a unique construction that incorporates memory and flexibility to create a smooth flat surface, provide maximum elasticity for consistent, repeated performance. They can be reused 100-150 times offering a far more superior return on investment than fiber sheets, which are limited to 5-10 times.

Plastic Tier Sheets are available in gauges from .025" to .0180" (0.635 mm to 4.50 mm) as well as multiple colors.

**Recapture Program**

Plastic Tier Sheets can be recycled through our Recapture Program. This program allows you to reduce your company's waste disposal costs, while minimizing your environmental footprint. For more information, please call 1-815-939-6192.
